<td>Risk Mitigation Factors</td>
<td>For the Scheme, risks would be the impact cost on securities, illiquidity in the underlying index stocks, the delayed communication of weightage changes by the index service providers and the delayed calculation of net change in assets of the Scheme, amongst others. It is proposed to manage the risks by placing limit orders for basket trades and other trades, proactive follow-up with the service providers for daily change in weights in index as well as monitor daily inflows and outflows to and from the Fund closely. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.</td>

Risk Mitigation Factors for all the above mentioned Schemes - Applicable for Mutual Fund Units:
- Global measures implemented: Implicitly, the AMC would monitor the tracking error of the Scheme on an ongoing basis and such delay may affect the NAV of the Scheme.
- Differentiation:
- The AMC would monitor the tracking error of the Scheme on an ongoing basis and such delay may affect the NAV of the Scheme.

Risk Profile of the Scheme: Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information document (SID) & Statement of Additional Information (SAI) carefully for details on risk factors before investment.

Scheme specific Risk:
- Trading volumes and settlement periods may restrict liquidity in equity and debt investments. Investment in Debt is subject to price, credit, and interest rate risk. The NAV of the Scheme may be affected, inter alia, by changes in the market conditions, interest rates, trading volumes, settlement periods and transfer procedures. The NAV may also be subjected to risk associated with investment in derivatives, foreign securities, forward or prepayment risk.
- Differentiation:
- The AMC would monitor the tracking error of the Scheme on an ongoing basis and such delay may affect the NAV of the Scheme.

Tracking Error
Tracking error is defined as the standard deviation of the difference between the daily returns of the Underlying Index and the NAV of the Scheme. Theoretically, the corpus of the Scheme has to be fully invested in the securities comprising the Underlying Index in the same proportion of weights as the securities have in the Underlying Index. However, deviations from the stated index replication may occur due to reason that the Scheme has to incur expenses, corporate actions pertaining to the Index including changes to the constituents, regulatory policies, ability of the Fund Manager to closely replicate the Underlying Index, etc. The Scheme’s returns may therefore deviate from those of its Underlying Index. Tracking Error may be subjected to the following reasons:

1. Fees and expenses of the Scheme.
2. Cash balance held by the Scheme due to dividend received subscriptions, redemption, etc.
3. Halt in trading on the stock exchange due to circuit filter rules.
4. Corporate actions
5. The Scheme has to invest in the securities in whole numbers and has to round off the quantity of securities shares.
6. Dividend payout.
7. Changes in the constituents of the underlying Index. Whenever there are any changes, the Scheme has to reallocate its investment as per the revised index but market conditions, interest rates, trading volumes, settlement periods and transfer procedures. The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, such tracking error shall not exceed by 2% p.a.

Creation Unit
“Creation Unit” is a fixed number of scheme units, which is exchanged for a basket of securities equal to the index value of the index called the “Portfolio Deposit” and a “Cash Component”. The facility of creating / redeeming units in Creation Unit size will be available to the Authorized Participants and Large Investors. RNAM reserves the right to add MODIFY Authorized Participants on an ongoing basis. The list of Authorized Participants will be available on the website of the Fund at www.nipponindiaetf.com. The Fund may also allow Cash# subscription /redemption of the scheme in creation unit size by large investors.

Illustration – Impact of Expense Ratio on the Returns

| Value of Rs 1 lac on 12% annual returns in 1 year, considering 1% Expense Ratio |
|----------------------------------------|-----------------|
| Amount Invested                        | 100,000.00      |
| NAV at the time of Investment          | 10.00           |
| No of Units                            | 10,000.00       |
| Gross NAV at end of 1 year (assuming 12% annual return) | 11.20 |
| Expenses (assuming 1% Expense Ratio on average of opening and closing NAV) | 0.11 |
| Actual NAV at end of 1 year post expenses (assuming Expense Ratio as above) | 11.09 |
| Value of Investment at end of 1 year (Before Expenses) | 112,000.00 |
| Value of Investment at end of 1 year (After Expenses) | 110,940.00 |

Note: Please note that the above is an approximate illustration of the impact of expense ratio on the returns, where the Gross NAV has been simply reduced to the extent of the expenses.
